

## **NSG 6430 Week 8 Soap Note Assignment Latest**

### **NSG 6430 Week 8 Soap Note Assignment Latest**

Each week, you are required to enter your patient encounters into the SU clinical tracking system. Your faculty will be checking to ensure you are seeing the right number and mix of patients for a good learning experience. You will also need to include a minimum of one complete SOAP note using the SOAP note template. The SOAP note should be related to the content covered in this week, and the completed note should be submitted to the Submissions Area

#### **Submission Details:**

By the due date assigned, enter your patient encounters into the SU clinical tracking system and complete at least one SOAP note in the template provided.

Name your SOAP note document SU\_NS6430\_W8\_A2\_LastName\_FirstInitial.doc.

Include the associated case number in your document.

Submit your document to the Submissions Area by the due date assigned.

### **Week 8 Discussion: iHuman Case Study – Neurological Disorders And Cognitive Perceptual Problems In Children**

This discussion assignment provides a forum for discussing relevant topics for this week based on the course competencies covered. For this assignment, make sure you post your initial response to the Discussion Area by the due date assigned.

To support your work, use your course textbook readings and the South University Online Library. As in all assignments, cite your sources in your work and provide references for the citations in APA format.

Start reviewing and responding to the postings of your classmates as early in the week as possible. Respond to at least two of your classmates' initial postings. Participate in the discussion by asking a question, providing a statement of clarification, providing a point of view with a rationale, challenging an aspect of the discussion, or indicating a relationship between two or more lines of reasoning in the discussion. Cite sources in your responses to other classmates. Complete your participation for this assignment by the end of the week.

For this assignment, you will complete an iHuman case study based on the course objectives and weekly content. iHuman cases emphasize core learning objectives for an

evidence-based primary care curriculum. Throughout your nurse practitioner program, you will use the iHuman case studies to promote the development of clinical reasoning through the use of ongoing assessments and diagnostic skills and to develop patient care plans that are grounded in the latest clinical guidelines and evidence-based practice.

The iHuman assignments are highly interactive and a dynamic way to enhance your learning. Material from the iHuman cases may be present in the quizzes, the midterm exam, and the final exam.

[Click here](#) for information on how to access and navigate iHuman.

This week, complete the iHuman case titled “Timothy Adams V3 PC”.

- Apply information from the iHuman Case Study to answer the following questions:
- What do you believe is your best course of action for this appointment?
- What clinical or historical findings will indicate the need for diagnostic studies and why? Which diagnostic studies will you initially order and why?
- What would be three differentials in this case?
