

Week 8 SOAP Note Assignment 3 NSG 6435

Week 8 SOAP Note Assignment 3 NSG 6435

Each week, you are required to enter your patient encounters into eMedley. Your faculty will be checking to ensure you are seeing the right number and mix of patients for a good learning experience. You will also need to include a minimum of one complete SOAP note using the Pediatric SOAP Note template. The SOAP note should be related to the content covered in this week, and the completed note should be submitted to the Dropbox. When submitting your note, be sure to include the reference number from eMedley.

Submission Details: Enter your patient encounters into eMedley and complete at least one SOAP note in the template provided.

Name your SOAP note document SU_NS6435_W8_A3_LastName_FirstInitial.doc.

Include the reference number from eMedley in your document.

NSG 6435 Week 9 Discussion

Discussion: [Infectious Diseases in Children](#)

The discussion assignment provides a forum for discussing relevant topics for this week on the basis of the course competencies covered.

To support your work, use your course and textbook readings and the South University Online Library. As in all assignments, cite your sources in your work and provide references for the citations in [APA](#) format.

Start reviewing and responding to the postings of your classmates as early in the week as possible. Respond to at least two of your classmates' initial postings. Participate in the discussion by asking a question, providing a statement of clarification, providing a point of view with a rationale, challenging an aspect of the discussion, or indicating a relationship between two or more lines of reasoning in the discussion. Cite sources in your responses to your classmates. Complete your participation for this assignment.

Using your course and textbook readings and the South University Online Library, perform research on the following:

- Assessment, diagnostic testing, and management of infectious conditions in a pediatric patient
- Differential diagnoses for presentation of symptoms involving infectious diseases in pediatric patients

After completing your research, consider this scenario: An eighteen-month-old child, well-known to your practice, presents with a seven-day history of fever ranging from 101 to 104.7 degrees Fahrenheit. On the fourth day of the fever, the emergency department had performed the following tests:

- A blood and urine culture
- A complete blood count

- A comprehensive [metabolic panel](#)
- The culture reports were found to be negative.

Today, the vitals of the child are the following:

Temperature: 101.5 degrees Fahrenheit

Heart rate: 120 beats/minute

Respiratory rate: 20 breaths/minute

Blood pressure: 90/40

Physical examination of the child indicates the following positive findings:

- Injected conjunctiva
- Palmar redness
- Magenta-colored lips
- Red macula
- Excoriating rashes in the diaper area

On the basis of the above information, respond to the following:

1. What will be your differential diagnoses for this patient?
2. What specific physical exam findings support these differential diagnoses?
3. Of the differential diagnoses you listed, which would be the most concerning?
4. What additional diagnostic tests will you recommend? Why?
5. What would be your focus for caregiver education?

NSG 6435 Week 10 Discussion

Discussion: [iHuman Case Study](#) – Adolescent Risk Behaviors

This discussion assignment provides a forum for discussing relevant topics for this week based on the course competencies covered. For this assignment, make sure you post your initial response to the Discussion Area.

To support your work, use your course textbook readings and the South University Online Library. As in all assignments, cite your sources in your work and provide references for the citations in APA format.

Start reviewing and responding to the postings of your classmates as early in the week as possible. Respond to at least two of your classmates' initial postings. Participate in the discussion by asking a question, providing a statement of clarification, providing a point of view with a rationale, challenging an aspect of the discussion, or indicating a relationship between two or more lines of reasoning in the discussion. Cite sources in your responses to other classmates. Complete your participation for this assignment by Wednesday, October 4, 2017.

For this assignment, you will complete an iHuman case study based on the course objectives and weekly content. iHuman cases emphasize core learning objectives for an evidence-based primary care curriculum. Throughout your nurse practitioner program, you will use the iHuman case studies to promote the development of clinical reasoning through the use of ongoing assessments and diagnostic skills and to develop patient

care plans that are grounded in the latest clinical guidelines and evidence-based practice.

The iHuman assignments are highly interactive and a dynamic way to enhance your learning. Material from the iHuman cases may be present in the quizzes, the midterm exam, and the final exam.

Here you can view information on how to access and navigate iHuman.

This week, complete the iHuman case titled “Angela Cotez VE”.

Apply information from the iHuman Case Study to answer the following questions:

1. Describe the evaluation tool and explain why this tool is essential in the care of the adolescent patient population.
2. Apply the findings of the scholarly research articles to the use of this evaluation tool and describe its validity and reliability.
3. Apply this evaluation tool to a patient situation and summarize your opinion of the results.
4. Describe a plan of care for the patient, depending upon the results
